(54) Title: **AIR EXCHANGE ATTENUATION APPARATUS**

(57) Abstract: An apparatus for attenuating the exchange of air in a freight container with the surrounding atmosphere comprises a flexible but substantially not resilient membrane which delimits in the container a first air volume from a second air volume in which cargo sensitive to humidity is stored. The first air volume is in communication with the surrounding atmosphere and capable of varying as a result of differences between atmospheric pressure and the pressure in the second air volume. Also disclosed is a freight container provided with the apparatus.
